

Interface are user-define data type. They are just like a class with a difference that all the method of an interface are default abstract & final and all the method of ~~abstract class~~ ^{interface} are default public, static & final. we can't create a obj. of interface.

Ans 2 Public modifier are allowed in interface

Ans 3 we can achieve full abstraction

• Interface give a perfect structure of a project

• Achieve functionality of multiple interface.

Ans 4

Abstract

In this all method are not abstract

Can't create a object of abstract class

Don't support multiple interface

Abstract keyword is used to declare abstract class

Interface

In interface all method are abstract

Can't create a object of interface

Support multiple interface

Interface keyword is used to declare the interface
